Joshua Basil

Queens, NY — 347-806-3473 — Joshuajbasil@gmail.com — linkedin.com/in/joshuabasil

Education

Stony Brook University **May 2027**

B.S. in Computer Science & B.S. in Applied Mathematics and Statistics *Stony Brook, NY*

- Coursework: Algorithms, Software Engineering, Systems Programming, Computer Networks, Machine Learning, Data Science, Data Analysis, Probability Theory, Linear Algebra, Numerical Analysis

Experience

SBU Vertically Integrated Projects Program (VIP) **Sep 2024 – Present**

Undergraduate Researcher *Stony Brook, NY*

- Developed Shop Red Live, a campus marketplace platform, by leading a 10-person cross-functional team to build core search, messaging, and listing features using the MERN stack, centralizing on-campus commerce into a single platform.
- Streamlined feature deployment across the development life cycle by conducting weekly progress meetings with university administrators, integrating feedback to align platform features with campus policy standards.

SBU Division of Information Technology (DoIT) **Jan 2024 – Present**

Lead Technician & Developer *Stony Brook, NY*

- Resolved technical support requests for 40,000+ faculty, staff, and students throughout the university by troubleshooting hardware, software, account, and connectivity issues across in-person and remote service platforms.
- Deployed and maintained internal web applications, including interactive dashboards, automation tools, and centralized documentation resources, to streamline standard workflows for 150+ DoIT employees.
- Coordinated DoIT Council initiatives by co-developing weekly newsletters, maintaining staff qualification records, and organizing training resources for 100+ student employees.

Google, Basta **Oct 2025 – Sep 2026**

Software Engineering Fellow (G-SWEP) *New York, NY (Remote)*

- Selected for two Google x Basta G-SWEP cohorts from a competitive applicant pool of 2,100+ students, completing weekly workshops and problem sets to advance core data structures and algorithms proficiency.
- Refined technical interview performance by completing 10 one-on-one mock sessions with a Google Software Engineer, optimizing solutions through time complexity analysis and rigorous edge case handling.

Technologent **Jun 2024 – Aug 2024**

Engineering & AI Intern *Dallas, TX (Remote)*

- Accelerated the development and testing of a Dell Protection Policy chatbot by integrating Dify LLM workflows with Qdrant vectorization, optimizing retrieval accuracy and response times.
- Improved deployment consistency by collaborating with 5+ engineers and data scientists while applying Docker, Kubernetes, and GitLab DevOps practices, expediting releases and eliminating environment discrepancies.

Projects

AutoFlow | *React, Node.js, Express.js, MongoDB* **Jul 2026 – Sep 2026**

- Centralized automotive workshop operations by building a comprehensive full-stack management platform, using RESTful APIs and MongoDB schemas to maintain real-time data flow for customer profiles, repair orders, and inventory.
- Enhanced repair tracking and job visibility by building an interactive role-based Kanban workflow, managing vehicles seamlessly through appointment scheduling, diagnosis, repair, payment, and customer pickup.

Stock Market Prediction Bot | *Python, Keras, TensorFlow, Pandas, NumPy* **Aug 2025 – Oct 2025**

- Designed 20+ technical features across momentum, volatility, and lagged market ratios, building a multi-stage data pipeline to process raw historical OHLCV data for next-day price prediction.
- Validated model predictive performance across multiple stock tickers by building an automated custom Python backtesting framework, achieving 65% directional accuracy on out-of-sample market data.

Skills

Languages: Python, Java, JavaScript, C, C++, SQL, HTML/CSS, OCaml, R
Frameworks/Libraries: React, Node.js, Express, Django, TensorFlow, Keras, Pandas, NumPy
Developer Tools: Git, GitLab, Docker, Kubernetes, VS Code, Figma, Dify, Qdrant, Arduino
Databases: PostgreSQL, MongoDB, MySQL
